

Temporary Scheduled Water Treatment Change to End in New Jersey American Water's Monmouth and Ocean County Service Areas

CAMDEN, N.J. – April 5, 2023 – On the week of April 17, New Jersey American Water will resume using chloramines in water treatment at its Swimming River Water Treatment Plant in Colts Neck and its Jumping Brook Water Treatment Plant in Neptune.

In February, as part of an annual routine maintenance program for its water distribution system, New Jersey American Water temporarily changed the water treatment process from a chloramine (combination) residual to free chlorine residual. The ten-week planned changeover to free chlorine residual enabled the company to perform routine maintenance.

The treatment change applies to New Jersey American Water customers in the following communities:

Aberdeen, Allenhurst, Asbury Park City, Atlantic Highlands, Bay Head, Bradley Beach, Colts Neck Township, Deal, Eatontown, Elberon, Fair Haven, Hazlet, Highlands, Holmdel Township, Interlaken, Little Silver, Loch Arbor Village, Long Branch City, Middletown Township, Monmouth Beach, Neptune City, Neptune Township (incl. Ocean Grove), Ocean Township, Oceanport, Red Bank, Rumson, Sea Bright, Shrewsbury, Shrewsbury Township, Tinton Falls, Union Beach, Wanamassa, and West Long Branch.

This treatment change also applies to residents living in the following communities that purchase water from New Jersey American Water: Aberdeen Township, Avon, Belmar, Keansburg, Keyport, Lake Como, Matawan, Naval Weapons Station Earle, and Point Pleasant Borough.

During the transition to free chlorine residual, some customers may have noticed a slight chlorine taste and odor in their water. With the resumption of the chloramination process, the taste and smell of chlorine will subside. [Chloramines](#) have long been an effective method of water disinfection that meets all EPA and NJDEP drinking water standards and have been used in Monmouth and Ocean counties since 2012.
